### AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

#### Listing of Claims

1. *(Currently Amended)* An oral composition providing surface conditioning effects on a subject's teeth and mucosal surfaces, said composition comprising a polymeric surface active agent present in an amount from about 1% to about 35% by weight of the composition sufficient to deposit on said oral surfaces a conditioning film providing (a) increased hydrophilic character as measured by a decrease in water contact angles or an increase in anionic surface charge and surface charge density and (b) decreased pellicle film thickness, wherein said polymeric surface active agent is a polyelectrolyte selected from the group consisting of polyphosphonates; copolymers of phosphate—or phosphonate-containing monomers or polymers with ethylenically unsaturated monomers, amino acids, or with other polymers selected from proteins, polypeptides, polysaccharides, poly(acrylate), poly(acrylamide), poly(methacrylate), poly(ethacrylate), poly(hydroxyalkylmethacrylate), poly(vinyl alcohol), poly(maleic anhydride), poly(maleate) poly(amide), poly(ethylene amine), poly(ethylene glycol), poly(propylene glycol), poly(vinyl acetate) or poly(vinyl benzyl chloride); and mixtures thereof.
2. *(Original)* An oral composition according to Claim 1 which provides improved mouth feel aesthetics selected from smooth teeth, clean-feeling teeth, clean mouth feeling and longer lasting clean feeling.
3. *(Cancelled)*
4. *(Cancelled)* An oral composition according to Claim 1, wherein said polymeric surface active agent is a polyphosphonate or a poly(diphosphonate/acrylate).
5. *(Original)* An oral composition according to Claim 1 further comprising an effective amount of a stannous ion source, wherein the staining potential of the stannous is reduced.

Appl. No. 10/734,536

Customer No. 27752

6. *(Original)* An oral composition according to Claim 5 comprising from about 3,000 ppm to about 15,000 ppm stannous ions in the total composition.
7. *(Withdrawn)* A method of providing surface conditioning effects to a subject's teeth and mucosal surfaces comprising administering to the subject an oral composition comprising a polymeric surface active agent present in an amount sufficient to which deposits on said oral surfaces a conditioning film providing (a) increased hydrophilic character as measured by a decrease in water contact angles or an increase in anionic surface charge and surface charge density and (b) decreased pellicle film thickness, wherein said polymeric surface active agent is a polyelectrolyte selected from the group consisting of polyphosphonates; carboxy-substituted polymers; copolymers of phosphate- or phosphonate-containing monomers or polymers with ethylenically unsaturated monomers, amino acids, or with other polymers selected from proteins, polypeptides, polysaccharides, poly(acrylate), poly(acrylamide), poly(methacrylate), poly(ethacrylate), poly(hydroxyalkylmethacrylate), poly(vinyl alcohol), poly(maleic anhydride), poly(maleate) poly(amide), poly(ethylene amine), poly(ethylene glycol), poly(propylene glycol), poly(vinyl acetate) or poly(vinyl benzyl chloride); and mixtures thereof.
8. *(Withdrawn)* A method of preventing and controlling tartar and tooth staining in a subject comprising administering to said subject an oral composition according to Claim 1.
9. *(Withdrawn)* A method of preventing and controlling tartar and tooth staining in a subject comprising administering to said subject an oral composition according to Claim 5.
